

Tom Dixon

Controline Sales, L.L.C.

I offer quality C/L stunt products based on my almost 70 years of flying stunt, and over 40 years serving control line stunt fliers. A very brief description follows:

Plans — I have nearly 250 control line plans, plus a number of classic R/C designs. These range from 1940's until now. Most are photo copies of original kit or magazine plan.

Engines — I "stunt modify" OS, ST, and other engines. Ask the guy who owns one about quality and "turn-around" time. Good used engines are usually available.

Kits — I can custom cut many stunt designs never offered as kits, and offer upgraded quality wood and hardware versions of many kits and ARF/ARC's.

Custom Building — Call about a design you are interested in. If I can cut a kit, I can build it too.

Foam Wings — I offer triple cored foam wings fully sheeted, partial sheeted, or bare foam.

I fly what I sell and am available for help by phone. (I don't do e-mail) For questions and price quotes call 9am-6pm eastern at 770-592-3279. If I don't answer, leave phone number, a detailed message and best time to reach you back. Good idea to clearly repeat that phone number! I return calls via my cell phone. It will show a 770 area code.

Thanks for your business!

About my Kits

The control line kits I offer are aimed at the serious, but not necessarily experienced, stunt flier. All wood is highest quality available and chosen for the job it's to do on the plane. I hand cut kits. It doesn't make sense to laser cut parts when the kit has a foam wing and the tail is sheet balsa. All that's left is the fuselage on a profile or sides and simple formers on a built-up fuselage. The cost of a laser cutter has to be figured into the price of those laser cut kits too, you know.

I normally do not include control system hardware in the kits as there are all kinds of "tastes" as to what should be used. However, I can provide these parts, same as I use myself, for an additional charge. I do not use, or sell, ball link type systems. I regard them as unnecessary expense and complication, and unreliable too.

When you consider time needed to build them, my kits are an absolute bargain, especially when you see current prices from other producers.

I don't waste time and money on fancy pictures on the boxes or anything else that would add cost and complexity to production. The kits are designed to fly, not sit on a Hobby Shop or collector's shelf.

Full fuselage kits are left with front end "un-cut" so you can make cowl or electric mount as you desire. Profile kits can be "electrified" via Brodak universal electric adapter kits.

Dixon Contest Profile Stunters

I am now offering several notable stunt designs in "Quick to build" profile kits. These kits have "already fully sheeted", triple cored foam wings, and cut to shape contest balsa tails and fuselages. No hardware is included, other than landing gear, and control surface joiners... you choose your favorite items. These kits are for .40 to .54 engines. Kits are \$225 each, plus shipping. (at cost)

Available designs:

Vector 40—Based on Brodak kit

Time Machine 40 ---two versions

Challenger ---Dick Sarpolus' design—Nostalgia legal (for wing L.G add \$25)

Tutor Too---Based on Top Flite ARF kit

Magician ---Based on the classic 48" Midwest kit

Ringmaster 576D Dixon modified Rice/Johnston design with larger flaps

38 Special Biplane

1957 Nobler

Tornado---reworked Sig Twister

XS Force---enlarged Sig Primary Force—for Fox .35--.46 engines

Big Tiger---enlarged Elliott Black Tiger—for Fox .35--.46 engines

Dixon “Quick Build Kits”

These quick-build “Full Fuselage” kits are similar to the profile line. They feature triple cored foam wings already fully sheeted or leading edge, trailing edge and center sheeting as appropriate. All parts are quality contest balsa cut to outline shapes. Plans included, of course. Landing gear provided: you supply the remaining hardware as you prefer. Because you do all the assembly, and alignment, as well as finish, these qualify for Builder of The Model rule.

Most kits are \$275 (plus shipping at cost)

Some available designs include:

Dixon Cardinal (based on Brodak Cardinal)

Time Machine 40, 50, 60 and 60RE

Skylark (based on the Sterling kit)

Chipmunk 1 (Van Loo) \$300 due to wing mounted landing gear

Foam Wings

I have been producing and selling full, and partially, sheeted triple-cored foam wings for years. However, someone recently asked me;” Why are you selling your wings at half price?” (\$185, full sheeted) My reply was “I’m not selling them at half price....that other guy is “gouging” you, charging \$300 plus for virtually the same thing!” Shipping at actual cost.

If you are looking for foam wings, give me a try. You can have “2 planes’ worth” for the price of our competitors! “You pays your money, and you takes your choice.....!”

Stalker Stunt Engines

All Stalker engines are ABC, baffle piston, ball bearing designs built specifically for control line precision aerobatics. The rear exhaust (RE) engines allow the furnished muffler to be hidden in the fuselage. Side exhaust (SE) engines have traditional bolt-on lightweight tube-type mufflers. All Stalker engines have $\frac{1}{4}$ X 28 threads on crankshaft. Available engines are listed below.

Stalker 40 SE	\$281.00--gone
Stalker 40 RE	\$281.00-gone
Stalker 46 SE	\$325.00--gone
Stalker 51 RE	\$350.00 --gone
Stalker 51SE	\$350.00---now \$250 till gone
Stalker 61 RE LT	\$365.00--gone
Stalker 61 RE longstroke	\$365.00--gone
Stalker 66 RE	\$425.00—now \$325 till gone
Stalker 76 RE	\$485.00—now \$385 till gone
Stalker 76 SE	\$485.00--gone

Engines

Since about 2021 no control line engines have been produced by any major manufacturer. Fox, O.S., Veco, K&B and Merco are all long gone. Ditto Brodak engines. That means that converted R/C engines must be used unless you fly electric.

For the last three years I have been acquiring good used engines. I clean, inspect, and add control line parts (NVA, Venturi, tongue muffler) and "stunt modify" if needed. I offer these at a fair price with the aim of helping new flyers or "retreads" get into the air. These all can run on today's fuels.

Generally available are OS-LA's, OS-FP's, and similar engines. Call about your specific needs.

Payment and Shipping

I don't accept credit or debit cards. I have in the past, and it was more trouble than it was worth for the fees involved! I accept personal checks, bank checks, money orders, or cash.

Kits are custom cut and must be paid up front. Custom building complete models are half down to start, with remainder due on delivery.

Shipping is usually by U.S. Postal Service. Fedex or UPS are higher in cost and less convenient. All services charge by "weight equivalent". In other words, a kit box 42x11x7 that weighs only 3 or 4 pounds, is charged as if it was far heavier due to the larger than standard size.

I will bill you for actual shipping cost once shipped. I make nothing on shipping. Of course, you can save on shipping by personally picking up the item. I cannot ship complete models.

Tom Dixon Video's

Over the last few years I have worked with Robert Storick's Stunt Hangar to present instruction videos on You Tube. I plan to continue to do so. Below are the titles/subtitles. You can call them up by requesting "Stunt Hangar Video's by Tom Dixon" on You Tube.

"Controls"	recorded 6-22
"Profile Builds"	6-23
"Fast Foam Wings"	10-23
"A Tiger Tale-Bob Elliotts Black Tiger"	2-24
"Stunt Engine Basics"	6-24
"Basic Bench & Flight Trim "	6-25
(on PAMPA C/L Video)	
"Foam Wings –Joint and Bellcrank Install"	7-25
